

PRODUCT REQUIREMENT DOCUMENT (PRD)

Project Name

AI-Powered Recruitment Compliance System

Client

Rohan Morris

Prepared By

Shahriar Hossain Jihad

Date

02 May 2026

1. Product Overview

This system is a **compliance-driven recruitment workflow platform** designed for medical/locum recruitment agencies.

The platform will manage and automate the **end-to-end candidate compliance process**, including document handling, validation, regulatory verification, reference management, and compliance pack generation.

The system will function as an internal operational tool used by compliance teams, recruiters, and managers.

2. Objectives

- Automate compliance workflows
 - Reduce manual document handling and tracking
 - Ensure regulatory compliance (GMC, NMC, HCPC)
 - Enable structured document lifecycle management
 - Automate reference request and follow-up process
 - Generate flexible compliance packs (PDF output)
 - Maintain system activity logs for compliance tracking
 - Provide real-time compliance status visibility
-

3. User Roles

3.1 Manager

- Create and manage users
- Assign roles and permissions
- Lock / unlock user access
- Monitor system activity

3.2 Compliance Team

- Manage candidate compliance workflows
- Upload and verify documents
- Perform regulatory checks
- Send and track references
- Generate compliance packs

3.3 Recruitment Consultant

- Submit candidate CVs
 - View compliance status
 - Access finalized compliance packs
-

4. System Modules

4.1 Candidate Management Module

Features:

- Create and manage candidate profiles
 - Store candidate information:
 - Name
 - Role (Doctor / Nurse / Other)
 - Specialty
 - Band classification
 - Assign recruitment consultant
 - Track candidate lifecycle status
-

4.2 Compliance Workflow Engine

Candidate Lifecycle States:

- Draft
- Pending Compliance
- Documents In Progress
- Awaiting References
- Under Review
- Ready for Pack
- Submitted

Logic:

- Automatic status progression
 - Restrict movement if requirements are incomplete
 - Real-time workflow updates
-

4.3 Document Management System

Supported Documents:

- CV
- Application Form
- Right to Work
- DBS
- GMC/NMC/HCPC Documents
- Certificates
- References
- Insurance
- ID Photo
- Occupational Health

Features:

- Upload / view / download documents
 - Categorization by document type
 - Status tracking:
 - Complete
 - Missing
 - Expiring
 - Expiry tracking with 4-week prior alert
-

4.4 Compliance Rule Engine

Features:

- Validate required documents
 - Apply conditional rules (e.g., passport OR visa)
 - Detect employment gaps (>2 weeks)
 - Flag missing or invalid documents
 - Provide compliance readiness status
-

4.5 Reference Management System

Features:

- Send reference request emails
- Support reference types:

- Professional
- Character
- Employment

Automation:

- Auto resend after 3 days if no response
- Track status:
 - Sent
 - Pending
 - Received

Email Handling (Updated):

- Dedicated system email inbox will be used
- Incoming reference emails will be parsed
- Parsed references will be attached to candidate records

Limitation:

- Email parsing will follow structured/basic logic
 - Advanced NLP-based parsing is not included in this phase
-

4.6 Regulatory Verification Module

Supported Checks:

- GMC
- NMC
- HCPC

Workflow:

- Manual verification process
 - Upload verification proof documents
 - Mark verification status
-

4.7 Compliance Pack Generator

Features:

- Flexible document selection
 - Fixed ordering of selected documents
 - Generate compliance pack in PDF format
 - Mark pack as submitted
-

4.8 Alerts & Notification System

Alert Types:

- Missing documents
- Expiring documents (4-week rule)
- Pending references

Channels:

- Dashboard alerts
 - Optional email notifications
-

4.9 Search & Filtering System

Filters:

- Name
 - Role
 - Specialty
 - Band
 - Recruiter
 - Compliance status
 - Expiry status
-

4.10 Audit & Activity Logging

Features:

- Basic action tracking only
- Track:
 - Upload
 - Update
 - Delete
 - Pack generation

Log Fields:

- User
 - Action
 - Timestamp
 - Entity
-

4.11 AI Module (Limited Scope)

Features:

- CV parsing (structured extraction)
 - CV formatting using templates
-

5. User Flow (High Level)

1. Recruiter uploads candidate CV
 2. Candidate profile is created
 3. Compliance team uploads and verifies documents
 4. System detects missing or expiring documents
 5. Reference requests are sent and tracked
 6. Incoming references are captured via email parsing
 7. Regulatory checks are completed
 8. System validates compliance readiness
 9. Compliance pack is generated (PDF)
 10. Recruiter accesses finalized pack
-

6. Non-Functional Requirements

Performance

- Efficient document handling
- Fast search and filtering

Security

- Role-based access control
- Secure file storage
- Data protection aligned with GDPR principles

Compliance

- Maintain audit logs
- Track system usage history

Scalability

- Designed for future SaaS expansion
-

7. Integrations

Current Phase:

- Eclipse CRM (manual sync only)

Future Scope:

- API-based integrations (not included in this phase)
-

8. Assumptions

- Regulatory verification will be manual
- Email parsing will be basic and structured

- CRM integration is manual
 - Only defined AI features are included
-

9. Out of Scope

- Direct API integration with regulatory bodies
 - Advanced email NLP parsing
 - Job board integrations
 - Bulk messaging / WhatsApp automation
 - Candidate-job matching engine
 - Timesheet or contract management
 - Full CRM replacement
-

10. Timeline

Estimated Development Time:
6–8 Weeks

11. Success Criteria

- Complete compliance workflow digitized
 - Reduced manual effort
 - Accurate document validation
 - Successful compliance pack generation
 - System usability for compliance team
-

12. Risks & Considerations

- Email parsing limitations
- Data inconsistencies in CVs
- Scope changes (if introduced later)

- Dependency on manual regulatory checks
-

13. Approval

This document represents the **final agreed scope** for Phase 2 development.

Any additional requirements beyond this scope will be treated as separate enhancements.
